

(a) geographic map — where each speed-change point is

(c) what happens at each point

SPACE — distance lines

- ① weather-cell crossing (0.5° , space)
- ② weather-cell crossing (0.5° , space)
- ④ weather-cell crossing (0.5° , space)
- ⑤ heading change at the strait (course ψ)
- ⑦ weather-cell crossing (0.5° , space)
- ⑧ weather-cell crossing (0.5° , space)

TIME — 6 h block lines

- ③ 6 h block, $t = 6$ h (time)
- ⑥ 6 h block, $t = 12$ h (time)

● Port A (start)

★ Port B (arrival)

(b) time--distance state space — same points; kink = speed change
